Address:	237 HUNTERS CREEK, DALLAS, GA. 30157

Description of Services:

ABC EDUCATE ME, LLC , provides a computer based learning system for students from grades K through 10 in Math and English Language Arts who are experiencing difficulty with these subjects. The system is user friendly, reserch based, and aligned with state and local academic standards. Students, almost universally, find it exciting, and challenging which results in improved performance. Using its 3-Dimensional Evaluation Engine, the system performs its own assessment of the student and identifies areas of weakness. It then designs a tutorial specifically for the student and provides hundreds of exercises to teach the problem areas until the subject is mastered. Computers and software are both supplied by the company at no cost to parents. Sessions may be held after school in school facilities, taught by certified instructors.

Description of Instructor Qualifications:

ABC EDUCATE ME, LLC recognizes the importance of having highly qualified instructors within the ranks of its tutors. Accordingly, the company focuses its recruiting on certified teachers holding valid educator certificates. The disciplines we seek are Math and English Language Arts. An added advantage for candidates is to have a working knowledge of computers and the ability to load software. In order to maintain a high level of proficiency in presenting and teaching our learning system, the company routinely conducts in-house training sessions for its tutors. In instances where the size of our classes are greater than 13 students, the company may elect to provide Teacher's Assistants. These persons typically function as para-professionals and have prior experience as tutors or teacher aides.

Description of Evidence of Effectiveness:

ABC Educate Me, LLC has a demonstrated record of effectiveness as a provider of a high quality learning system that delivers positive results to students and parents. In most cases, students enrolled in our program have increased their test scores on average at least 30 points by the end of the term. This record of achievement was true for both English Language Arts and Math. Our effectiveness is attributable to a combination of our system's design, which uses "drill and practice," and text and graphics presentations, after identifying student weaknesses. In addition to benefiting academically, students gained by mastering the use of computers.
