

CSP # 09-02, Cisco Network Equipment for the Academy of IISD

Addendum 2

Vendor Question: I've come across a few items that contradict themselves when reading the RFP. The RFP states: 6(b) Bullet 8 - The IISD will provide the appropriate IP addresses and configuration information to the vendor for the APs provided as a part of this proposal. The vendor shall configure each AP as required.

But when you read under section C titled "Irving Independent School District will", it states: Bullet 4 - Configure all newly installed equipment after installation.

Please request further clarification regarding the configuration requirements for both the network switches and the wireless controller/access points.

Irving ISD Response: The selected vendor will be responsible for all items defined in section 6 as specified in the CSP. However, Irving ISD prefers and offers the vendor the opportunity to forego bulleted items listed in paragraph 6(a) 5, 7, 8 and 6(b) 8 by pre-shipping the equipment prior to the installation.

Once the winning vendor has been selected Irving ISD will request the equipment be shipped prior to the scheduled installation date. This will allow the Irving ISD network department to configure, label, and inventory the equipment prior to vendor installation. If this request cannot be honored, Irving ISD will either upload the configurations after vendor installation of the equipment (paragraph 6(b), bullet 8), or provide pre-written configurations to the vendor for uploading prior to or during installation (paragraph 6(c), bullet 4).
