

Butterflies

Shipment #1

larvae

Larvae:

- No special care is needed while students observe the larvae stage.
- Once the chrysalises have formed you will need to move the chrysalises into the butterfly cages. (CAUTION: move gently and slowly)
- The chrysalises need to hang from the side of the cage (use of double sided tape makes this an easier task)

Butterflies:

- Once the butterflies emerge they will be hungry.
- Sugar Water and juices are their favorite. (CAUTION: make sure they will not fall into the water or juice and drown. Place a juice box with straw or a sponge saturated with sugar water to help avoid that problem.
- Fresh flowers (if the season permits) are also favorites of butterflies but they still need moisture.
