

RUBI'S MATH PROJECT

Castillo, Rubi

A triangle is a polygon having three angles and three sides.
On page 11 a sharks fin looks like a triangle.

A rectangle is a quadrilateral with four congruent angles.
On page 394 a remote control looks like a rectangle.

A circle is the set of all points in a plane that are the same distance from a given point called the center.
On page 307 the planet Earth looks like a circle.

If I were to build my own house I would use a triangle for my roof, a rectangle for the walls and circles for the windows.
