

A circle is the set of all points in a plane that are the same distance from a given point called the center.  
Page 462 you can find an apple

A square is a parallelogram with all sides congruent and all angles congruent.  
Page 510 you can find a poster board

A triangle is a polygon having three angles and three sides.  
Page 11 you can find a dolphin fin

I would do a birdhouse for my geographic shapes. I would use the square to build the outside. I would use the triangle to do the roof of the birdhouse. I would use the circle to use it as the hole for the bird to go in.
