Mrs. Graham

**Square: Plane figure having 4 equal sides and 4 right angles.**

**Cylinder: solid geometric figure described by The circumference as it moves along a straight Line**

**Sphere: geometric solid where the surface is the Same distance in every direction from the center Point.**

**oval: egg shaped plane figure**

**In my favorite hobbies I would use a sphere to shoot through an *oval* like basketball. Or to throw like a baseball.**

**A *square* would be like the backboard on a basketball goal. A cylinder would be like a baseball bat or the shaft in a golf club.**
